

## Counter Analyst (Part-time)

Camgian Microsystems is seeking a detail oriented & dependable Junior Analyst to support and help advance our Egburt Fintech product.

The individual in this position will be a key Analyst to review the newly launched product images from visual cameras trained on target facilities. The ideal candidate has a strong interest in programming and machine learning to potentially automate the identification of images that need to be processed, using R or Python.

Primary responsibilities in this position will include daily counting and classifying images as well as paying attention for changes in patterns that may be important. The role will work closely with the Egburt production team in data collection and data quality assessment. This position will blend detail oriented visual analysis with real-time news flow analysis to help articulate the data and what it may mean.

If you are an individual with natural grit, a strong curiosity, and a “why not” attitude, who is looking to become a key contributor in the launch of a cutting-edge product, then keep reading...

### **This job might be for you if:**

- You enjoy synthesizing both quantitative and qualitative data quickly and efficiently, often assimilating facts from prior events.
- You show initiative through researching and tackling new problems with little guidance from others.
- You have the ability to learn established processes and procedures carefully, with attention to detail, while also an ability to improve and evolve current processes.
- You are an excellent programmer or have a keen interest in machine learning against collected images.
- You have a high school degree or equivalent, and/or have experience in Python or R for machine.
- You are looking for a great resume builder in a summer internship.

### **It would be great if you have:**

- Programming experience
